

DRAW A ROCKETSHIP

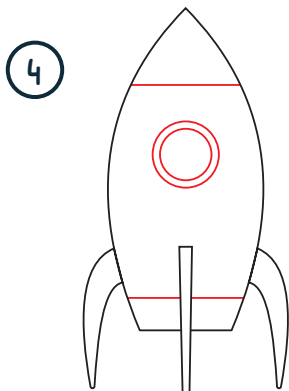

1 Draw two curved lines from the sides going down.

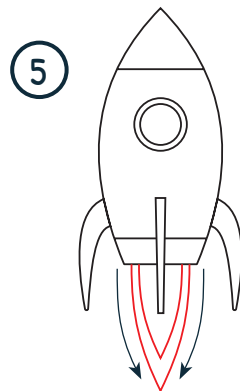

2 Create rocket stabilisers by drawing 2 curved lines from each side of the rocket that meet at the bottom. Draw a rectangular shape for the center stabilizer.

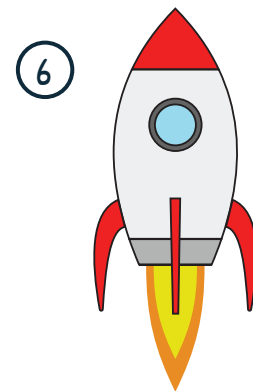

3 Close the rocket's thruster by drawing a straight line across the base of the rocket.

4 Draw two circles for the ship's window and two lines to separate the ship's head and thruster.

5 Draw 2 pairs of curved lines to create a flame below the rocket ship.

6 Now colour your spaceship and add small details however you like.
